Recitation 11: Convergence Tests

Joseph Wells Arizona State University

March 31, 2014

Theorem (Divergence Test). If $\sum a_n$ converges, then $\lim_{n\to\infty} a_n = 0$, and if $\lim_{n\to\infty} a_n \neq 0$, then $\sum a_n$ diverges.

Theorem (Integral Test). If f is positive, continuous, and decreasing for $x \ge 1$ and $a_n = f(n)$, then

$$\sum_{n=1}^{\infty} a_n \quad and \quad \int_1^{\infty} f(x) \, dx$$

either both converge or diverge.

Theorem (*p*-Series Test). *The p-series*

$$\sum_{n=1}^{\infty} \frac{1}{n^p} = \frac{1}{1^p} + \frac{1}{2^p} + \frac{1}{3^p} + \frac{1}{4^p} + \cdots$$

- converges if p > 1, and
- diverges if 0 .

Theorem (Ratio Test). Let $\sum a_n$ be a series with nonzero terms.

Theorem (Root Test). Let $\sum a_n$ be a series.

• $\sum a_n$ converges absolutely if $\lim_{n \to \infty} \sqrt[n]{|a_n|} < 1$.

•
$$\sum a_n$$
 diverges if $\lim_{n \to \infty} \sqrt[n]{|a_n|} > 1$ or $\lim_{n \to \infty} \sqrt[n]{|a_n|} = \infty$.

• The Root Test is inconclusive if $\lim_{n \to \infty} \sqrt[n]{|a_n|} = 1$.

Theorem (Comparison Test). Let $0 \le a_n \le b_n$ for all n.

Example. Determine whether the series converges or diverges. $\sum_{n=1}^{\infty} \frac{n}{\ln(n)}$

$$\lim_{n \to \infty} \frac{n}{\ln(n)} \stackrel{L'H}{=} \lim_{n \to \infty} \frac{1}{1/x} = \infty,$$

so the series diverges by the Divergence Test.

Example. Determine whether the series converges or diverges. $\sum_{n=1}^{\infty} \frac{1}{n^2 + 1}$

Since
$$f(x) = \frac{1}{x^2+1}$$
 satisfies the conditions for the integral test
$$\int_1^\infty \frac{dx}{x^2+1} = \lim_{r \to \infty} \int_1^r \frac{dx}{x^2+1} = \lim_{r \to \infty} \arctan(x) \Big|_1^r = \frac{\pi}{2} - \frac{\pi}{4} = \frac{\pi}{4},$$

so the series converges by the Integral Test.

Example. Determine whether the series converges or diverges. $\sum_{n=1}^{\infty} 2n^{-3/2}$

$$\sum_{n=1}^{\infty} 2n^{-3/2} = 2\sum_{n=1}^{\infty} \frac{1}{n^{3/2}},$$

so the series diverges by the p-Series Test.

Example. Determine whether the series converges or diverges. $\sum_{n=0}^{\infty} \frac{n^2 2^{n+1}}{3^n}$

$$\lim_{n \to \infty} \left| \frac{a_{n+1}}{a_n} \right| = \lim_{n \to \infty} \left| \frac{(n+1)^2 2^{n+2} 3^{-(n+1)}}{n 2^{n+1} 3^{-n}} \right| = \lim_{n \to \infty} \frac{2(n+1)^2}{3n^2} = \frac{2}{3} < 1$$

so the series converges by the Ratio Test

Example. Determine the convergence or divergence of $\sum_{n=1}^{\infty} \frac{e^{2n}}{n^n}$.

$$\lim_{n \to \infty} \sqrt[n]{|a_n|} = \lim_{n \to \infty} \sqrt[n]{\frac{e^{2n}}{n^n}} = \lim_{n \to \infty} \frac{e^2}{n} = 0 < 1$$

so the series converges by the Root Test

Example. Determine whether the series converges or diverges $\sum_{k=1}^{\infty} \frac{1}{2 + \sqrt{n}}$.

The series looks similar to a divergent *p*-series $\sum_{n=1}^{\infty} \frac{1}{n^{1/2}}$, but alas $\frac{1}{2+\sqrt{n}} \leq \frac{1}{\sqrt{n}}$ for each n > 1. So compare it to the harmonic series. Then $a_n = \frac{1}{n} \leq \frac{1}{2+\sqrt{n}} = b_n$, so since

 $\sum a_n$ diverges, so does $\sum b_n$ by the Comparison Tests

Assignment

Recitation Notebook: §8.4 - #1, #2, #3 §8.5 - #1, #2, #3

Recommended Problems (not for grade): $\S8.4 - #4$ $\S8.5 - #5$

As always, you may work in groups, but every member must individually submit a homework assignment.
